Abstracts INTER/MICRO-48
- Application of microscopy to the pigment industry, 59; Study of crystals, oriented aggregates and lyotropic mesomorphs, E. E. Jelley, 59
- Application of microscopy to polymorphism of tristearin-type fats, O. T. Quimby, 58
- Crystal optics of microscopical views, W. A. O'Brien, N.J. and J. D. H. Donnay, 58
- Effect of particle size on diffraction images, H. Osterberg, 59
- Electron metallography, R. D. Heidenreich, 60
- Electron microscope goniometry, A. F. Kirkpatrick, 59
- Light and electron microscopical studies of cellulose fibers, C. E. Hock, 59
- Electron microscopical study of organic pigments, F. A. Hamm, 60
- Electron microscopy of particle aggregation in carbon black, J. H. L. Watson, 59
- Electron microscopy of the tubercle bacillus, C.I. Reed, S.R. Rosenthal and B.P. Reed, 60
- Principles of phase microscopy, F. Zernike, C. P. Saylor and H. Jupnik, 58
- Properties of evaporated gold, P. G. Wilkinson and L. S. Birks, 59
- Resinography, T. G. Rochow, 58
- Results of Electron Microscope studies on bacteriophage action, T. F. Anderson, 60
- Statistical analysis of electron microscope particle size determinations, P. L. Copeland, 59
- Techniques of High Speed Microtomy, E. F. Fullam, 60
- Ultraviolet, visible and infrared microscopy, K. J. Heinecke, 58
